SUMMARY

Software engineering graduate with production experience in serverless backends on AWS and frontend development. Cut per-event costs by over 90% during a cloud and backend internship, and builds independent projects in TypeScript, Go and .NET covering web security auditing, API load testing and cloud deployment. Preparing for the CompTIA Security+ and AWS Certified Developer exams.

EXPERIENCE

Frontend Engineer · MediaGo — 08/2025 – Present · Remote

- Build frontend features for the MediaGo platform and its new permit portal in a team of eight developers.
- Test both applications before release and document the test suites.

Cloud & Backend Developer Intern · NAMA Foundation — 08/2025 – 12/2025 · Kuala Lumpur

- Cut per-event costs by **over 90%** by moving to a serverless architecture with tokenization and atomic functions.
- Reduced server overhead by **85%** by adding Redis caching.
- Built a multi-event mobile app with a synced web dashboard, letting non-technical staff update live data across events.
- Built the web backend with self-healing synchronization between the mobile app and dashboard.
- Set up automated deployment pipelines and health monitoring that sends status alerts to mobile devices.

PROJECTS

Portcullis · Web security auditor — GitHub

- Built a tool that grades a website's externally visible security from a single URL, checking HTTP headers, TLS, SPF/DKIM/DMARC, cookies, exposed files and security.txt.
- Kept the audit logic in a framework-agnostic TypeScript core shared by the React client and Express server.

Pantai Hospital Website Rebuild · Team project — Live demo · GitHub

- Owned the AWS integration for a team rebuild of a hospital website, running a .NET Core backend on EC2 with Lambda, S3, SQS, SNS, X-Ray and IAM behind Cloudflare.
- Fixed memory exhaustion on an under-provisioned EC2 instance by configuring swap, avoiding an instance upgrade.
- Built frontend and backend features and tested the application.

Algorithm Visualizer · Interactive learning tool — Live demo · GitHub

- Built a TypeScript and React visualizer for pathfinding and sorting algorithms with timeline scrubbing, speed control and live pseudocode highlighting.
- Added a race mode that runs two algorithms side by side; deployed on Cloudflare Workers.

API Stress Tester · Command-line tool — GitHub

- Built a Go CLI that sends a fixed number of requests with a configurable concurrency limit, then reports success count, success rate, average duration and a count per status code.

ML Drawing Classifier · Real-time sketch recognition — GitHub

- Built a Python drawing app that classifies hand-drawn input live and compares five models: linear SVM, KNN, logistic regression, decision tree and Gaussian naive Bayes.
- Wrote a pipeline that converts drawings into 50x50 grayscale feature vectors, with custom class training and model save/load.

EDUCATION

BSc (Hons) Software Engineering · Asia Pacific University of Technology and Innovation (APU) — 09/2023 – 09/2026

Coursework completed; degree conferral expected April 2027.

SKILLS

Languages	TypeScript, JavaScript, Python, Java, Go, C#, C++, Dart, SQL, R
Frontend & mobile	React, Flutter, HTML, CSS
Backend	Express, Django, .NET Core, Redis
Cloud	AWS (EC2, Lambda, S3, SQS, SNS, X-Ray, IAM), Cloudflare Workers, Firebase
DevOps	Docker, Kubernetes, GitHub Actions, Git
Security	HTTP security headers, TLS, SPF/DKIM/DMARC
Hardware	ESP32, basic circuit design, cloud-to-device messaging with AWS

CERTIFICATIONS

CompTIA Security+ · CompTIA — In progress · exam by December 2026

AWS Certified Developer – Associate · Amazon Web Services — In progress · exam by December 2026
